

MEGADECK[®] HD

MegaDeck HD Installation Equipment Recommendations

It should be first mentioned that each MegaDeck HD mat weighs approx. 1092 pounds and any lifting equipment, straps, chains, or etc. should have the proper load rating and the load lifted should never exceed the load rating.

Any lifting apparatus can be utilized for the tasks listed above such as a truck mounted crane, excavator, boom crane, forklift, wheel loader or etc. It is recommended that a wheel loader become the equipment of choice. A wheel loader with forks offers the most flexibility in installing, stacking, storing and etc. of the MegaDeck HD mats but more importantly it is the most time efficient type of equipment used. I have attached a link to a standard type.

<http://www.cat.com/cda/layout?m=308872&x=7>

We recommend a 10,000 pound lifting capacity with 6' forks. This type will allow you to lift multiple mats at once which increase the rate of install and handling.

Numerous brands of this type of equipment are available:

Caterpillar

Komatsu

Volvo
